

AIR GRID

CRAFTING YOUR DREAMS

www.airgrid.in

We deeply admire Ratan Tata not only for his remarkable contributions to his company but also for his significant impact on society as a distinguished entrepreneur and philanthropist. His unwavering integrity as a leader is truly mesmerizing and sets a sterling example for aspiring individuals and organizations alike. Inspired by his visionary approach, our company is committed to instigating positive change within our industry while striving to serve society to the best of our ability. Ratan Tata's profound words,

**"If you want to walk fast, walk alone,
but if you want to walk long, walk together,"**

Meet the Future Of Facade System

 **AIR GRID**

The New Version Of Skyline Facade System

Our Company

01

Our Vision

"To be using new technologies in the facade and windows industries and provide inventive and premium solutions with architectural elegance.

Our objective is to be devoted, passionate, and genuine to our customers to the point where they serve as our brand's endorsers.

“ That our client will be
Our **Brand Ambassador** “

Our Mission

"To become one of the top businesses in the façade and window industries by gradually expanding sustainably each year. A satisfied customer base and recurrent project collaborations will follow from this."

Our ultimate goal is to exceed client expectations by delivering exceptional service and results, while contributing positively to the environment and communities in which we operate.

Through continued innovation and investment in our team members' knowledge and professional development, we will lead the industry in pioneering new technologies and methods for creating beautiful, efficient facades that stand the test of time.

The Facade Service

Facade services refer to the design, installation, and maintenance of building facades. They include various aspects such as structural design, material selection, thermal and acoustic performance, lighting, and more. Facade services aim to enhance the aesthetic appeal and energy efficiency of buildings.

Structural Glazing (Four-Sided Silicone)

Structural glazing, also known as four-sided silicone glazing, is a type of glazing system that uses a structural silicone sealant to attach the glass panels to the frame, creating a seamless and frameless appearance.

Curtain Wall System

A curtain wall system is an exterior building envelope system that consists of non-structural, lightweight frames and glass or other panel materials, providing aesthetic appeal and energy efficiency.

ACP Cladding

ACP (aluminum composite panel) cladding is a type of cladding system that uses two aluminum sheets sandwiching a core material, such as polyethylene, to provide a lightweight and durable facade solution.

HPL Cladding

High Pressure Laminate (HPL) panels are a form of cladding typically manufactured by layering sheets of wood or paper fibre with a resin and bonding them under heat and pressure. They sometimes include additional chemicals to provide fire retardant properties and are available in a wide range of colours and finishes.

Patch Fitting Glass System

Patch fitting glass system is a type of glass facade system that uses patch fittings to secure the glass panels to the supporting structure, providing a minimalistic and elegant look

Spider Fitting Glass System

Spider fitting glass system is a type of glass facade system that uses spider fittings to secure the glass panels to the supporting structure, providing a unique and modern look.

Tile Cladding

Tile cladding is a type of cladding system that uses tiles, such as ceramic or porcelain, to provide an aesthetically appealing and durable facade solution.

UPVC Doors & Windows

UPVC (unplasticized polyvinyl chloride) doors and windows are a type of building envelope system that use UPVC frames to provide structural support for doors and windows. They are durable, energy-efficient, and low-maintenance, and can be customized to fit various design and functionality requirements.

UPVC Sliding Doors

UPVC sliding doors are a type of door system that use UPVC frames and slide horizontally on a track. They offer energy efficiency, durability, and a low-maintenance option for a modern and sleek look.

UPVC Sliding Window

A UPVC sliding window is a type of window that you can slide open and closed. It's made out of a special material called UPVC, which is really strong and durable.

Fold and Slide Door

Fold and slide doors are a type of door system that fold and slide to open, providing a large opening and unobstructed view. They are often used in outdoor spaces and can be made from various materials.

UPVC Casement Window

UPVC casement windows are a type of window that open outwards using a crank handle. They offer energy efficiency, durability, and a low-maintenance option for a modern and functional design

Lift and Slide Door

Lift and slide doors are a type of door system that lift off the track before sliding to provide a large opening and unobstructed view. They offer energy efficiency, durability, and a modern design.

Vertical Slide Window

A vertical slide window is a window that goes up and down instead of side to side like a door. It's like a big square that can move up and down to let air in or out of a room.

Aluminum System Doors and Windows

Aluminum system doors and windows are a type of building envelope system that use aluminum frames to provide structural support for doors and windows. They are durable, lightweight, and low-maintenance, and can be customized to fit various design and functionality requirements.

Aluminum Sliding Doors

Aluminum sliding doors are a type of door system that use aluminum frames and slide horizontally on a track. They offer a modern and sleek look and are easy to operate.

Aluminum Sliding Window

Aluminum sliding windows are a type of window system that use aluminum frames and slide horizontally on a track. It's like a big picture frame that you can move to let fresh air in or keep the rain out.

Fold and Slide Door

A Fold and Slide Door is a special kind of door that can fold up like an accordion and slide to the side to open up a big space. It's like magic!

Casement Window

A casement window is a window that opens like a door. You turn a handle and the window swings out to let air in. It's like a little door in your wall that you can open and close.

Lift and Slide Door

A lift and slide door is a big door that you can open by lifting it up a little bit and then sliding it to the side. It's like a big puzzle piece that you can move out of the way to go outside or let fresh air in.

Slimline Window

A slimline window is a window that is very thin and doesn't take up a lot of space. It's like a regular window, but it's skinnier so it can fit in smaller places.

Aluminum Modular Glass Railings

"Aluminum Modular Glass Railings" means that there is a fence made of metal called Aluminum and it has see-through glass panels in between the metal bars. It's like a fancy fence that you can see through!

Aluminum Cover Cap Railing

Aluminum cover cap railing is a modern and sleek railing system that features a cover cap over the top of the posts. It is durable and low-maintenance, making it a great option for both indoor and outdoor applications.

Aluminum Brackets Railings

Aluminum bracket railings are a type of railing system that uses brackets to attach the railing to the surface. It is a robust and customizable solution that may be applied in different contexts.

Aluminum Concealed Railings

Aluminum concealed railings are a type of railing system that is mounted from the side, providing a sleek and modern appearance.

Staircase Railings

Staircase railings are a safety feature that provides support and stability while going up or down the stairs. They can be made from various materials and styles to match the design of the staircase and surrounding area.
